Nowadays, restoration of landscapes is intensively going on all over the world. There are no methods to restore his perfect experience, because new knowledge is still being accumulated through practical experience. Depending on the topicality of the topic, the challenge of restoration is considered to be the restoration of degraded landscapes: from the local to the regional and global levels in order to create a single chain system and restore the degraded landscape worldwide and promote the existing social-economic; Overcoming environmental problems and challenges. In the mechanisms of restoration of degraded landscapes, the restoration of forests and agroforestry occupies a leading place as a landscape methodology integrated and adapted to nature protection and socio-economic factors. It offers new opportunities and development of new development principles.

The paper discusses the experiences of WWF, IUCN, GEF, various international organizations, countries and regions, methods, variations in the processes of landscape restoration, how they can be changed and new conclusions made during the work process.

Experience and practice of current projects of landscape restoration in Georgia.

The purpose of the research is to study the processes of restoration of degraded landscapes in the world and in Georgia.

Landscape restoration as resource production and development of methods based on socio-economic and nature protection principles.
